PROFESSIONAL SUMMARY

Senior DevOps engineer with 14+ years designing, automating and running production cloud infrastructure for fintech, telecom and conversational AI across AWS, GCP, Azure and on-premises. Takes infrastructure from design through Terraform and Ansible automation, CI/CD and GitOps delivery (GitHub Actions, ArgoCD, GitLab CI, Azure DevOps) and production Kubernetes (CKA, CKS, AZ-400 certified), then keeps it healthy with monitoring, incident response, root-cause analysis, high availability and disaster recovery. Strong Linux foundation (RHCE), hands-on cloud networking and security, and a record of cutting cloud cost without hurting performance. 18 production systems shipped across 8 countries, including four years fully remote and async.

TECHNICAL SKILLS

Cloud & Multi-Cloud: AWS (EKS, EC2, S3, RDS, IAM, VPC, ALB, CloudFront, Site-to-Site VPN), GCP (GKE, Cloud Armor), Azure, Azure Stack Hub, Nebius GPU Cloud, hybrid and on-premises

Infrastructure as Code & Automation: Terraform (reusable modules promoted across environments), Ansible, Bash, automated provisioning, configuration and patch management

CI/CD & GitOps: GitHub Actions, ArgoCD, GitLab CI/CD, Azure DevOps Pipelines, Jenkins, multi-environment promotion, rollback strategies

Containers & Orchestration: Kubernetes (GKE, EKS, Kops, Kubeadm), Docker, Istio, NGINX Ingress, Kong, cluster upgrades, node lifecycle, horizontal/vertical autoscaling, requests & limits, capacity planning

Observability & SRE: Datadog (APM, metrics, dashboards), Prometheus, Grafana, ELK/EFK, on-call, incident response, root-cause analysis, postmortems, SLOs and alert tuning

Networking & Security: VPC and hybrid network design, site-to-site VPN, firewall rules, IAM, Kubernetes security and RBAC (CKS), Cloudflare (DNS, WAF, DDoS), GCP Cloud Armor, SSL/TLS, vulnerability management, ISO 27001, PCI-DSS, SOC 2 controls

High Availability, DR & Data: PostgreSQL, MySQL, MSSQL, Azure SQL, MongoDB (Atlas and self-managed), Redis, Kafka, RabbitMQ, NATS, MinIO; replication, automated failover, tested restores, DR design

Linux & Systems: Linux administration (RHCE, RHCSA), Windows Server, Active Directory, datacenter and virtualisation

AI-Assisted Engineering: Claude, Codex, Gemini, GPT for IaC and pipeline review, incident investigation, log analysis, documentation

PROFESSIONAL EXPERIENCE

Verbex.ai (Hishab Technologies Ltd.) — Dhaka, Bangladesh (Remote) Jun 2023 - Present

Senior DevOps Engineer

- Own cloud infrastructure end to end for a conversational-AI platform across GCP, AWS, Azure and Azure Stack Hub, from design and provisioning through production, staging and development environments.
- Define infrastructure as code in reusable Terraform modules promoted across production, staging and development; automate provisioning, configuration, patching and routine operations with Ansible and Bash.
- Built GitOps delivery with GitHub Actions and ArgoCD, giving every service a repeatable build/test/deploy path from git and a rollback route engineers trust in production.
- Run production Kubernetes on managed GKE and self-managed Kops/Kubeadm clusters: deployments, upgrades, node lifecycle, autoscaling and requests/limits tuning for performance under live traffic.
- Own monitoring, logging and alerting with Datadog APM, Prometheus/Grafana and ELK, so releases can be verified, regressions are caught quickly and production incidents are traced to root cause.
- Design high-availability and disaster-recovery protocols: operate Kafka, Redis, RabbitMQ, NATS, MinIO, PostgreSQL, MySQL and MongoDB Atlas with replication, failover and tested restores.
- Led two full-estate migrations (AWS to on-premises, on-premises to GCP) with automated provisioning, cutover plans, rollback criteria and no unplanned downtime; provisioned a Nebius GPU cluster.
- Apply cloud security best practices: Cloudflare WAF and GCP Cloud Armor in front of production, plus recurring dependency and vulnerability remediation.
- Apply AI tooling (Claude, Codex, Gemini, GPT) daily to draft and review IaC and pipeline code, speed up debugging and log analysis, and generate runbooks and documentation.

Rosebay Group — Reading, United Kingdom (Fully Remote) Jun 2021 - Dec 2024
Independent DevOps Consultant (Part Time) *May 2023 - Dec 2024*
Lead DevOps Engineer, DevOps Team *Jul 2022 - Apr 2023*
Senior DevOps Engineer *Jun 2021 - Jun 2022*

- Delivered cloud infrastructure and CI/CD for a multinational fintech group, shipping production platforms in the USA (Orbispay), Dominica (MLajan), Cambodia (AEON eMoney), Canada (Whitehaven), South Sudan (DigiCash) and the UK (Finify).
- Built automated CI/CD pipelines in GitHub Actions and Azure DevOps across DEV, UAT, DEMO and PROD, standardising build, test and deployment for every product in the group.
- Cut Orbispay cloud spend by over $2,000/month (~$24k/year) through rightsizing, cleanup and environment scheduling, without degrading performance.
- Designed high availability for payment workloads across Azure SQL, AWS RDS, MSSQL, PostgreSQL and MongoDB, with replication and automated failover.
- Secured cloud networking: Cloudflare DDoS protection and edge configuration for Orbispay, and AWS Site-to-Site VPN tunnels for regulated third-party API integrations.
- Gave product teams self-service tooling and environment access so they could build, deploy and verify releases without waiting on the infrastructure team.
- Led the DevOps team async across five country offices and authored its technical and security policies; later advised the group on DevOps strategy and platform architecture as an independent consultant.

Mir Telecom Group — Gulshan-1, Dhaka, Bangladesh Apr 2019 - Jun 2021
Senior System Engineer, IT Infrastructure & Cloud Operations *Jan 2020 - Jun 2021*
System Engineer, IT Infrastructure & Cloud Operations *Apr 2019 - Jan 2020*

- Built and operated Mir Cloud, the group's private cloud service: virtualised compute, storage and networking in the group datacenter, with client environments provisioned to specification.
- Built hybrid-cloud connectivity with a site-to-site VPN into the Singapore Equinix datacenter, linking on-premises and colocated infrastructure for cloud and client workloads.
- Ran 24/7 operations for Linux and Windows estates across six group companies: monitoring, capacity planning, backups, patch management and security hardening.
- Handled on-premises server setup end to end: rack and stack, OS installation, RAID and storage configuration, network and firewall rules, and hand-over to production.
- Managed identity, DNS, mail and endpoint security (Active Directory, Microsoft 365, Bitdefender GravityZone); planned scheduled and emergency maintenance windows.

Bangla Telecom Limited — Dhaka, Bangladesh Nov 2012 - Mar 2019
Network Operations Engineer, Operations & Maintenance *Jan 2016 - Mar 2019*
Assistant Network Operations Engineer *Nov 2012 - Dec 2015*

- Carried 24/7 on-call and production monitoring for the core NGN network of a national Interconnection Exchange operator, keeping carrier-grade services available.
- Ran incident response on live, traffic-affecting outages: alarm triage, fault isolation and root-cause analysis, turning findings into runbooks and operational documentation.
- Planned change windows and upgrades with carriers and operators, with rollback plans to protect live traffic; led the operations team and cut repeat escalations through reporting and process improvements.

Earlier (2012): Assistant System Engineer — Switch Com Ltd. • Assistant Network Engineer — T.N. International

CERTIFICATIONS

Kubernetes: Certified Kubernetes Administrator (CKA) • Certified Kubernetes Security Specialist (CKS)

Cloud & DevOps: Microsoft DevOps Engineer Expert (AZ-400) • Azure Administrator Associate (AZ-104) • Azure Fundamentals (AZ-900)

Systems & Security: RHCE • RHCSA • MCSA: Windows Server 2016 • ISO/IEC 27001 Information Security Associate • EFK Stack: Enterprise-Grade Logging and Monitoring • JNCIA-Junos • MTCNA

TEACHING & COMMUNITY

- Deliver corporate Kubernetes and CI/CD workshops for bank engineering teams: GitLab CI/CD on Kubernetes (Al-Arafah Islami Bank), CKA-focused training (Pubali Bank), container modernisation (Community Bank).
- Mentor international student research groups in Finland on scalable 5G network components on Kubernetes and prediction-driven Kubernetes scaling automation.

EDUCATION

B.Sc. in Electrical & Electronic Engineering — American International University-Bangladesh, 2012 • CGPA 3.60 / 4.00
